

What is Response to Intervention?

RTI is a multi-tiered approach to instruction that

- Incorporates evidence-based interventions at all tiers.
- Uses a systematic problem-solving approach that focuses on students' response to those interventions as a basis for determining their instructional needs and intensity.

Integrated System of Support: Multiple Tiers of Intervention

Goals of Rtl

- To use a systematic problem-solving process to identify children who need additional support or more intensive levels of instruction
- To provide students with a level of evidence-based instructional support matched to their demonstrated response to intervention
- To provide a data-based method for evaluating the effectiveness of instructional approaches and changing/improving them
